DATHEON

ACADEMIC EVALUATION & TALENT ACCREDITATION DIRECTORATE

OFFICIAL PERFORMANCE SCORECARD & CODE AUDIT

DATE: NOVEMBER 5, 2026

CANDIDATE NAME:	**Sahu Abhishek**
APPLICATION ID:	DT-2026-LQTVU
INTERNSHIP TRACK:	Data Analytics & Power BI Internship
SUBMITTED REPO:	https://github.com/Datheon
PRIMARY CODE:	Deliverable Repository Source Code
AUDIT DECISION:	**APPROVED & CERTIFICATION CLEARED**

TECHNICAL EVALUATION CRITERIA & SCORE BREAKDOWN

EVALUATION PILLAR	AUDIT OBSERVATION & DELIVERABLE STATUS	WEIGHT	SCORE
1. Project Architecture	Modular ETL pipeline design, clean data model schemas, transformation logic	25%	**9.3 / 10**
2. Functional Correctness	Accurate aggregation logic, verified statistical summaries, clean output exports	35%	**9.2 / 10**
3. Code Hygiene & Standards	Vectorized data operations, clean script structuring, PEP8 compliance	20%	**9.0 / 10**
4. Error Resilience & Input	Missing value imputation, null check guards, robust schema type coercion	20%	**9.1 / 10**

OVERALL COMPOSITE SCORE: **9.2 / 10.0** **ACADEMIC GRADING:** **GRADE A+ (DISTINCTION)**

TECHNICAL GRADING BASIS & METHODOLOGY

The codebase was audited via static AST analysis and automated evaluation scripts. Scores reflect procedural execution, modular decoupling, standard library usage, and adherence to industry-standard clean code conventions. The candidate demonstrated strong algorithmic thinking and execution speed.

RECOMMENDED TECHNICAL IMPROVEMENTS (HOW TO SCORE 10/10)

- Type Annotations: Introduce PEP 484 type hints (e.g. def process(data: dict) -> bool:) for enterprise codebases.
- Automated Test Cases: Add pytest / unittest suites to systematically verify edge cases & input validations.
- Externalized Data Assets: Decouple hardcoded dictionary lists into external JSON / REST API endpoints.
- Error Logging: Replace standard print debugging with Python's built-in logging module (logging.info/error).
