LETTER OF RECOMMENDATION

Candidate: Sahu Abhishek | ID: DT-2026-LQTVU | Program: Data Analytics & Power BI Internship

TO WHOM IT MAY CONCERN,

It is with the highest degree of professional confidence that I provide this official Letter of Recommendation on behalf of **Datheon** for Sahu Abhishek. During their tenure as a Technical Intern in our Data Analytics & Power BI Internship cohort, Sahu Abhishek completed an intensive 4-week engineering residency focused on modern software architectures, production-grade microservices, and autonomous data workflows.

Throughout the internship, Sahu Abhishek exhibited exceptional technical capability, analytical discipline, and proficiency in Python programming. Their final capstone repository was subjected to rigorous code audits by the **Datheon** Engineering Directorate, evaluating criteria including code modularity, architecture efficiency, automated test coverage, and documentation rigor. Sahu Abhishek successfully achieved an outstanding composite evaluation score of **9.2/10.0,** qualifying them for graduation with Grade A+ (Distinction).

Beyond raw technical dexterity, Sahu Abhishek demonstrated exemplary professional tenacity, intellectual curiosity, and self-directed problem-solving. They consistently incorporated engineering feedback with agility, respected delivery milestones, and proved capable of independently translating conceptual requirements into clean, production-ready software solutions.

While contributing as an intern, Sahu Abhishek's hands-on development and deep conceptual mastery in Python programming have established strong architectural foundations that indirectly support and enrich the underlying principles deployed across **Datheon's** commercial AI application ecosystem: **LitLyzer** (AI Literature Intelligence & Automated Research Synthesis), **FlowLyzer** (Enterprise Workflow Automation & DAG Process Orchestration), **AppLyzer** (Find your Next App for monetization), and **PropLyzer** (AI Real Estate Analytics & Telemetry), alongside the proprietary **Datheon** Automation System. Their strong grasp of core fundamentals positions them to contribute meaningfully to production-scale platforms of this caliber.

I hold Sahu Abhishek in the highest regard and have absolute conviction in their future career trajectory. They possess both the foundational knowledge and practical engineering instincts required to excel in high-impact software engineering roles, advanced research, or graduate studies. I wholeheartedly recommend them without reservation.

Should you require further verification or detailed evaluation telemetry, please contact our Directorate.

FatimaZohra.
